Skill

- JavaScript (ES5) (ES6) | Html | Css | React Js | Styled-Componets | Mui | Axios| Api | Git | Postman | Responsivo| Dom
- TypeScript | MySQL | Node | Express | Jest | Unit Testing | OOP | Cors | Uuid | Bcryptjs | knex |Rest| Deploy
- Frontend | Backend | Full-Stack

Experience

BootCamp-Labenu	07/2022 End

Frontend

- During my frontend learning, I worked with core technologies for web development, such as JavaScript (ES5/ES6), HTML and CSS. I used React JS with Styled-Components and Mui for complex interfaces, and Axios for HTTP requests to APIs. I acquired knowledge in Git for code versioning and tested API functionalities with Postman. I learned how to develop with responsive design and understood the importance of using APIs and interacting with the DOM to create dynamic and interactive applications. I also seek to implement UI/UX designs and create intuitive interfaces for the end user.

Backend

- During my apprenticeship in backend, I acquired skills in several technologies and practices. I used TypeScript to develop in a secure and scalable way and managed relational databases with MySQL. I mastered Node.js, Express and Jest to create robust and testable APIs. I worked with three-tier architecture, separating presentation layer, business logic and data access. I used OOP and tools like UUID and Bcryptjs to increase application security and CORS to allow communication between different domains. I managed the communication with the database using Knex and exposed the API functionalities following the Rest pattern. Finally, I learned how to deploy the application in environments like Render and Api publications on Postman.

SoftSkill

- I believe that interpersonal skills are just as important as technical skills. During my bootcamp, I learned the importance of assertive communication, ethics, leadership, self-management, and valuing people. I worked in teams on several projects, where I was able to learn to challenge myself and support my colleagues in their tasks. In addition, I always strive to work hard to achieve our common goals and contribute to building a collaborative and productive work environment.

Currently

- Since then, I have applied my frontend and backend skills to individual projects and pursued freelance opportunities. I keep up to date on new technologies and software development practices to improve and solidify my knowledge in the technologies I already master, and I am always willing to learn new ones and contribute to building technological solutions that improve people's lives.

Education

BootCamp 1060hrs - FullStack	Labenu	BRA	2022
Graduate Technologist – Financial Management	Universidade Estácio de Sá	BRA	2021
Curso - Inovando com Css	TimTech	BRA	2021
Curso - Lógica Programação	Fundação Bradesco	BRA	2021

Projects

- **Cubus** : FullStack project, CRUD, dynamic layout integrated with Google Charts(React Js |Node Js |3 Layer Architecture|Rest)(12/2022)
- **Labex** : Fictitious travel agency frontend project, with authentication (React Js | Mui | Api | React-Router-Dom 6) (10/2022)
- **Labook** :Social-networking project with the goal of promoting connections, authentication and crud. (Cors |Uuid | Bcryptjs|knex (11/2022)

Next Competencies

- **Frontend**: Bootstrap,Wordpress ,Sass,Next.js,React Native.
- **Backend: P**hyton,Doker,Kubernex.
